# **Product Environmental Report**

## ViewFinity S80PB

02/16/2024

At Samsung, we work to integrate eco-conscious technology and innovation in all our products. By considering sustainability at every step of the product life cycle, we aim to empower our customers to join us in our journey to build a better tomorrow together.

\* Certification acquisition : S27B80\*P, S32B80\*P \* Certification acquisition <sup>[2] [3]</sup> : S27B80\*P, S32B80\*P \* Certification acquisition : S27B80\*P, S32B80\*P

# **Product Carbon Footprint**

At Samsung Electronics, we assess a product's entire life cycle, including the sourcing, production, distribution, product use, and recycling phases, to understand the environmental impacts of our products.

At the production stage, we are aiming to expand the development and application of recycled materials with a lower carbon footprint. At the distribution stage, we are working to minimize packaging volume and weight to reduce carbon emissions. Through improving product energy efficiency, we are trying to improve the environmental impact at the use stage.

#### ViewFinity S32B80\*P Life Cycle carbon emissions: 366 kg CO2eq. <sup>[5]</sup>

Production 61.3%				Use <b>37.8</b> %	Disposal
10%	20%	40%	60%	80%	100 <mark>%</mark>
* based on LS3	2B800PXUXEN	configuration <sup>[6]</sup>	Distribution		

\* The figure above calculates the environmental impact of one product over the entire life cycle as CO<sub>2</sub> emissions.<sup>[6]</sup>

# Sourcing

Samsung Electronics is committed to improving resource circulation throughout the life cycle of electronic products, from raw materials to disposal and recycling.

To build toward a circular system, we are endeavoring to use recycled materials and collecting e-waste to extract materials for reuse. By 2030, we aim for 50% of the plastic used in our DX products to incorporate recycled resin. By 2050, we will see this figure increase to 100%.

Samsung Electronics uses the recycled materials for parts in the ViewFinity S80PB products. In addition, we are trying to manage its supply chain so that minerals used in its products are mined in accordance with OECD due diligence guidelines.

#### Plastic

S80PB's rear cover contains a minimum of 10% recycled content, consisting of 5% post consumer recycled polycarbonate (PC) and 5% ocean-bound polyethylene terephthalate(PET).

Stand : 35% of the plastics used in the stand of the product is ABS post consumer recycled material.<sup>[7]</sup>

#### Responsible minerals

For internationally disputed minerals such as tantalum, tin, tungsten, and gold, we elect to only use minerals supplied by smelters that have obtained global third-party certifications. Minerals that raise human rights violations or environmental destruction issues during mining are included in the management<sup>[8]</sup> list and are avoided in our management of the mineral supply chain.

To prevent hazardous substances from entering our products, we rigorously inspect manufactured parts and raw materials through our chemical management system.

Chemical Mgmt.

Our standards for the "Product Environment Management Substances Operation Rules" <sup>[9]</sup>are based on global regulations and standards. We voluntarily established reduction plans for the use of potentially hazardous substances as well as legally regulated substances.

# Production

We are expanding the use of renewable energy at our business most sites around the world.

Energy infrastructure and regulations vary widely by jurisdiction and require region-specific transition plans.

Renewable Energy

**Reducing material &** Scrap recycling

We plan to run all operations of the DX division on renewable energy by 2027.<sup>[10]</sup>

We are constantly trying to reduce waste and expand recycling. Company-wide, we plan to obtain a platinum-level Zero Waste to Landfill certification, issued by safety certification organization Underwriters Laboratories (UL), for all global operations by 2025.

Most sites that produce Samsung Electronics TV, audio, and display products have been certified for environmental management (ISO14001) and energy management (ISO50001). [10]

Samsung Electronics is increasing the efficiency of using raw materials to reduce environmental impact during the production stage. We are using External Gas Molding (EGM) technology, which uses air instead of plastic to shape parts, thus reducing the amount of plastic used in the injection process.

# Distribution

To reduce the environmental impact of our product packaging, we are replacing plastic packaging and vinyl wraps with paper and recycled materials.

We are also reducing the volume and weight of packaging to mitigate greenhouse gas emissions in the transportation and shipping process.

We plan to remove plastic from packages (except cushions) of all TV, audio, and display products by 2030 and replace them with paper.

Recycled Packaging Materials are applied to accessory bags and stand bags, which are subsidiary materials for product packaging.<sup>[12]</sup>

The plastic band that binds the accessory cable has been changed to a paper band.

Recyclability of the paper box was enhanced by removing the metal staples used in the side joints of the box. <sup>[13]</sup>

# Use

Environmental experts support product development at Samsung Electronics so we can empower our customers to use our products more sustainably. During the product development phase, our stress tests help ensure the longevity and consistent performance of our products.

To reduce greenhouse gas emissions during the use of our key products, we set our plan to reduce power consumption by an avg. of 30% by 2030, compared to products with the same specifications in 2019. <sup>[14]</sup>

\* Power consumption of S32B80\*P<sup>[15]</sup>

For the parts of TV and display products that have been replaced by modules, we are changing the design so that they can be separately repaired.<sup>[16]</sup>

# Recycling

To promote the circular economy and a low-carbon society, we are expanding responsible recycling in more than 50 countries around the world.

Samsung's local recycling programs provide collection services tailored to each region for customers disposing ewaste, and we take back electrical and electronic waste regardless of product brand.

We are trying to reuse parts to reduce waste even in the repair process of TV and display products. In 2022, about 550,000 parts were recovered from 36 countries, and 230,000 of them have been reused after quality verification.

Upcycle packaging is designed to allow consumers to upcycle the box that is usually discarded after transporting the product. By removing promotional stickers that were attached to the box surface and reducing ink usage, packaging recyclability was increased, and we are striving to reduce the impact on the environment.

Customers can make their own props such as magazine stands and pet products using dot patterns printed on the surface of the packaging box. We are diversifying props designed through campaigns and contests and releasing drawings of props. <sup>[17]</sup>

## Endnotes

#### Disclaimer

1. The Carbon Trust of the U.K. calculated greenhouse gas generated in the entire process from production to disposal of products in accordance with evaluation standards, and Samsung obtained a "carbon footprint" certification that evaluates carbon emissions of products.

```
Certification model: S27B80*P, S32B80*P
```

\* In particular, "Carbon Footprint-Reducing CO<sub>2</sub>" certification can be obtained when carbon generation is reduced compared to previous equivalent models.

2. Energy star is a program in which the Environmental Protection Agency (EPA) of the United States certifies that it is an energy-efficient product among various electrical and electronic products. Certification acquisition model: S27B80\*P, S32B80\*P

\* In model name notation, '\*' consists of numbers (0 to 9) or alphabets (A to Z).

**3.** EPEAT (Electronic Product Environmental Assessment Tool) is an eco-friendly certification system for electronic products in the United States and is certified in three grades: Gold, Silver, and Bronze by evaluating various items such as prohibition of the use of harmful substances, energy efficiency of products, ease of decomposition and recycling of products and packaging materials, and corporate social responsibility. Certification acquisition grade: EPEAT (Silver)

Certification acquisition model: S27B80\*P, S32B80\*P

\* In model name notation, ' \* ' consists of numbers (0 to 9) or alphabets (A to Z).

**4.** TCO (TCO Certified) is the certification for products with less environmental impact given by TCO, the Swedish confederation of professional employees. Certification acquisition model: S27B80\*P, S32B80\*P

5. Guidelines and conditions applied to the calculation of carbon emissions

- PAS 2050:2011 Specification for the assessment of the life cycle greenhouse gas emissions of goods and services
- Product Carbon Footprints : Requirements for Certification v2
- Database : Ecolnvent 3.8, Korea LCI DB

6. Life Cycle Assessment System Boundary

- Production: Pre-manufacturing (parts and materials that make up the product) and assembling the product at Samsung Electronics

- Distribution: Distribution from Vietnam to the Netherlands
- Use: Used for 4 years
- Disposal: Waste disposal of parts and materials

7. Environmental Claim Validation (ECV) verification was obtained from UL for recycled materials.

- Verification method: Environmental Claim Validation Procedure for Recycled Content, UL 2809 Fifth Edition - Rear cover : Contains a minimum of 10% recycled content, consisting of 5% post consumer
  - recycled polycarbonate (PC) and 5% ocean-bound polyethylene terephthalate (PET).
  - Stand : ABS post consumer recycled material 35%
- \* ABS : Acrylonitrile Butadiene Styrene

 $\mathbf{8}$ . Samsung Electronics operates a mineral management process based on OECD due diligence guidelines for responsible minerals.

## Endnotes

#### 10. Details of the conversion of renewable energy

Samsung Electronics joined RE100, a global initiative, to reduce indirect carbon emissions (Scope 2) caused by power use and decided to push for the conversion of renewable energy to used power by 2050. First, Samsung Electronics is pushing to achieve its renewable energy target at all overseas operations by 2027. For our sites in the US, China, and Europe that have already reached this goal, we plan to expand direct power purchase agreements (PPAs) centering on the regions equipped with active renewable energy policies and systems. The DX division is pushing to achieve its renewable energy target by 2027, both at home and abroad. https://www.samsung.com/global/sustainability/planet/climate-action/#anchor2

11. Samsung Electronics adopts global standards such as environmental management (ISO14001) and energy management system (ISO50001), mandates all workplaces to obtain the certification, and recommends partner companies to obtain related international certifications to spread environmental safety management, which is reflected in the comprehensive evaluation of partner companies.

Except for one small production subsidiary in South Africa (SSAP), all of Samsung Electronics' workplaces have obtained the certification as of 2021, and 86% of partners that are subject to comprehensive evaluation.

- 12. The recycled materials applied to the product packaging materials are as follows.
  - Subsidiary Materials Containing 50% Recycled Plastics: Accessories Bag
  - Subsidiary Materials Containing 10% Recycled Plastics: Stand Bag

13. Recyclability of paper boxes was increased by removing metal staples and replacing them with glue. The reduction of box assembly process time also reduced energy consumption in the manufacturing process.

14. We plan to reduce power consumption by an avg. of 30% in 2030 compared to the same performance model in 2019 by applying low power technology to representative models of seven major electronic products such as TVs, monitors, smartphones, refrigerators, washing machines, air conditioners, and PCs. We are conducting twice/yearly implementation checks on the annual improvement goals of the representative models for each product line, and we are trying to spread the energy efficiency technology applied to the representative models horizontally to other models.

15. Average power consumption of S32B80\*P is 33.0 W.

Measurement criteria model: LS32B800PXUXEN

Power consumption measurement criteria: Regulation (EU) No 2019/2021 (as amended) and EN 50564:2011 Power consumption is calculated based on the power measured in our laboratory based on the initial shipment status product.

Different countries have different regulatory conditions or measurement standards, and measurement methods may be updated to change measurements when each country's regulatory conditions change. The model name/model code of the product may vary by region or country where Samsung Electronics sells the product.

16. By applying about 230,000 single-product repairs in 102 countries of about 49 subsidiaries in 2022, we are trying to reduce the burden of repair costs on consumers by reducing about \$151 compared to the previous average repair costs, as well as reducing environmental impact by extending the life of products. (availability may vary by country)

## Endnotes

#### Recycling

Samsung established waste collection systems in each region as we work tirelessly to enhance the collection and recycling of waste products. We also offer product take-back and recycling services for Samsung products in countries with local take-back legislation. We are always looking to expand to additional locations. https://www.samsung.com/global/sustainability/digital-library/policy-document/

#### **Environmental Strategy**

Samsung Electronics announced the New Environmental Strategy in September 2022 with the aim of addressing global environmental issues through our innovative technologies. This paradigm shift is essential for our sustainable growth and will create meaningful momentum to reinforce our competitiveness.

The New Environmental Strategy was developed based on our commitment to achieve net zero by 2050, joining the world's effort to combat climate change, maximize resource circularity to advance towards a circular economy, and continuously address environmental challenges with technological innovation. This effort is expected to bring positive change to the broader ecosystem of the ICT industry as we engage in the manufacturing and supply of an extensive range of products and services.

#### **Corporate Sustainability Management**

Samsung is constantly striving to deliver innovative products and services across the value chain. This is rooted in our core values in economy, society and environment. Therefore, we monitor the financial and non-financial impacts that we exert on society in order to maximize our positive impacts while minimizing any negative ones.

#### Declaration of REACH Substances of Very High Concern (SVHCs) Disclosure

#### Model: LS32B804PXNXGO

Dear Customer:

The European Regulation 1907/2006 on the *Registration, Evaluation, Authorization, and Restriction of Chemicals* (REACH) entered into force on 1<sup>st</sup> June, 2007.<sup>1</sup>

Article 33 of REACH requires suppliers to inform recipients and respond to consumer enquiries if an article contains more than 0.1% (by weight per article) of any substance on the candidate list of Substances of Very High Concern (SVHC).<sup>2</sup>

Samsung Electronics Co. Ltd (the "SEC") hereby declares the presence of substances on the SVHC candidate list which are contained in a quantity of more than 0.1% (w/w) in the above product and / or its packaging<sup>3</sup> placed on the European Community market by the SEC and its subsidiaries.

The substances on the REACH SVHC candidate list in concentrations greater than 0.1% by weight per article are listed below.

Substance name	CAS No.	Application	
Lead	7439-92-1	ASSY PCB MAIN	
Leau		ASSY ACCESSORY

#### Declaration of RoHS Compliance for LS32B804PXNXGO

Samsung Electronics Co. Ltd (the "Company") hereby declares that LS32B804PXNXGO placed on the European Community market by the Company and its subsidiaries are compliant with Directive 2011/65/EU on the Restriction of Certain Hazardous Substances in Electrical and Electronic Equipment.

RoHS compliant means that where the product falls under the scope of the EU RoHS Directive, this product does not contain the following substances:

- Lead (0,1 %)
- Mercury (0,1 %)
- Cadmium (0,01 %)
- Hexavalent chromium (0,1 %)
- Polybrominated biphenyls (PBB) (0,1 %)
- Polybrominated diphenyl ethers (PBDE) (0,1 %)
- Bis(2-ethylhexyl) phthalate (DEHP) (0,1 %)
- Butyl benzyl phthalate (BBP) (0,1 %)
- Dibutyl phthalate (DBP) (0,1 %)
- Diisobutyl phthalate (DIBP) (0,1 %)

In excess of the indicated maximum concentration values by weight in homogenous materials, unless the substance is subject to an exemption specified in the Directive1. All products are compliant with the CE marking and further information requirements as foreseen by Directive 2011/65/EU.

This declaration represents the Company's knowledge and belief which is partially based on information provided by third party suppliers.

Further details about Samsung Electronics' RoHS compliance programme can be found in the accompanying FAQ document or at:

http://www.samsung.com/uk/aboutsamsung/samsungelectronics/corporatecitizenship/data\_corner.html
